Available for contract work

— Erbil, Kurdistan Region of Iraq · working remotely

Hana Burhan

> Software Engineer

I build complete business systems under contract, from the first requirement to the production server. Companies hand me whole products, new modules, or the bug backlog their team has no time for, and I deliver them finished, tested and documented.

Hana Burhan — Erbil

```
~/hana

$ hana status

available    yes, for contract work
location     Erbil, Iraq · remote, UTC+3
takes on     full systems · modules · bug fixing · rebuilds
delivers     working code, deployment, docs, handover
speaks       English · کوردی · العربية
```

6
production systems delivered

5-person
product team led at Bzmarr

3 languages
shipped with right-to-left layouts

Since 2023
building software professionally

Hope Center clinic system and website

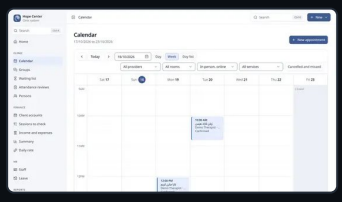

CLIENT	SECTOR	ROLE	SCOPE
Hope Center, Erbil	Mental health & psychosocial support	Sole developer	Requirements → deployment → training

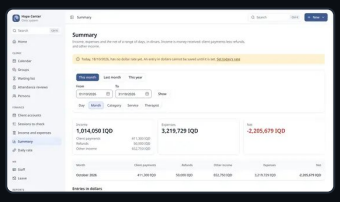

Hope Center ran its clinical work on paper forms and spreadsheets. I built one secure system for the whole center: patient records, scheduling, clinical documentation, billing, HR and reporting, plus a public website in English, Kurdish and Arabic, on a contract deadline.

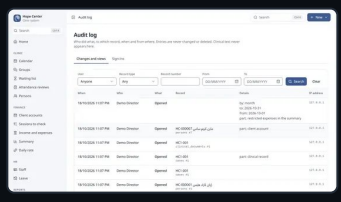

`11 modules` `178 automated test files` `16 architecture decision records` `2FA for every user`

Clinical record

Calendar

Finance in IQD + USD

Audit log

WHAT I BUILT

- One permanent record per client, with separate episodes of care in each service line.
- Scheduling for individual, couple, family and group sessions and a waiting list. Clash checks run under database locks.
- The center's clinical forms, digitised: draft → finalised → locked, with dated addenda.
- Finance in IQD and USD on an append-only ledger, plus HR, role home screens and monthly reports.

PRIVACY AND ENGINEERING

- Clinical notes readable only by the assigned therapist and the Clinical Director, enforced in policies and database queries.
- Sensitive fields encrypted at rest; never sent to the browser or logs. Append-only audit log protected by triggers.
- Trilingual website with no cookies and no third-party requests, rebuilt from code by a setup script.
- Docker in every environment; tagged releases go to staging first, with automated backups.

Logistics SaaS

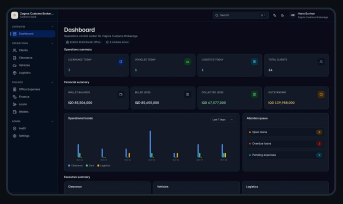

Hana Customs border operations platform

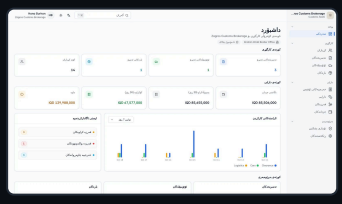

PRODUCT	SECTOR	ROLE	MODEL
Hana Customs	Customs brokerage & logistics	Sole architect & engineer	Multi-tenant SaaS

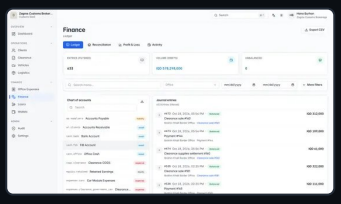

A production SaaS that digitizes customs clearance, vehicle import and export, and logistics for private clearance offices at the border crossings of the Kurdistan Region. Every office works as an isolated tenant on one shared platform, with its own money, staff and records.

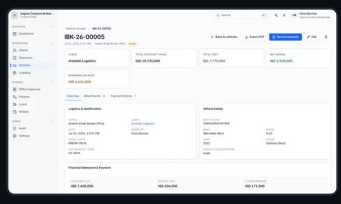

`Row-level tenant isolation` `Double-entry accounting ledger` `3 interface languages` `Light + dark themes`

Dark mode

Kurdish, right-to-left

Double-entry ledger

Vehicle record

WHAT I BUILT

- Vehicle clearance batches with FIFO cost allocation, logistics tracking and automated PDF documents.
- A double-entry ledger as the single source of truth for wallets, transfers, loans, government-account repayments and office expenses.
- Profit and loss and activity reporting for each office.

ENGINEERING

- Tenant isolation through global query scopes, checked by an automated cross-tenant leakage test suite.
- Dynamic roles and permissions, audit logging, two-factor authentication, job queues and full-text search.
- English, Kurdish and Arabic with full right-to-left layouts, on desktop and mobile.

Bzmarr construction marketplace

COMPANY	SECTOR	ROLE	PLATFORMS
Bzmarr, part of Mellat Holding	Construction e-commerce & tendering	Team lead, full-stack	iOS, Android and web

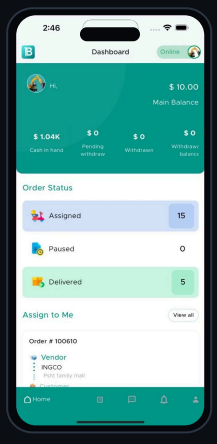

Bzmarr connects contractors, suppliers and homeowners in Iraq to buy building materials, rent equipment and request services. I led the product team and worked across the stack on the APIs and services behind the web store and three mobile apps: one for customers, one for sellers and one for delivery drivers.

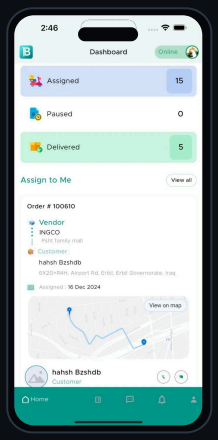

Customer · search

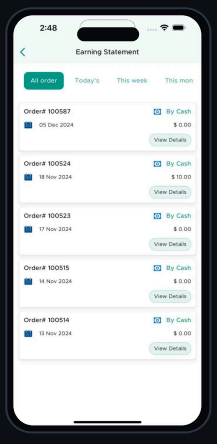

Customer · Pro

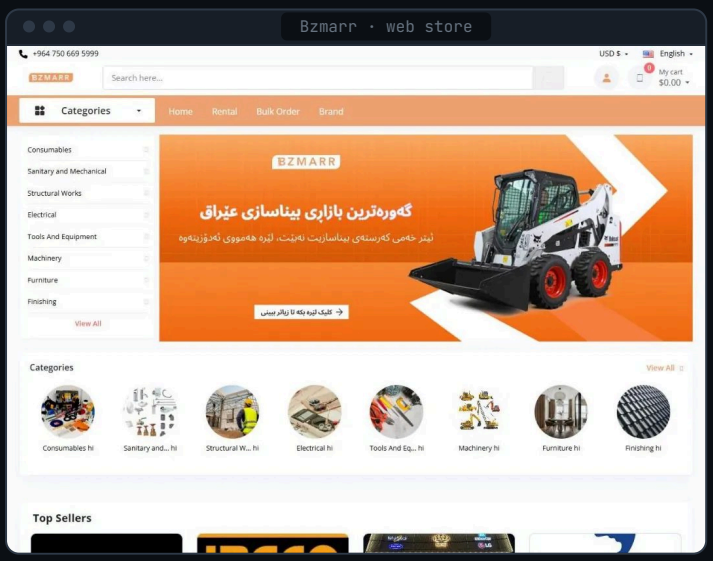

Driver · dashboard

Driver · route

Driver · earnings

1 **Me: team lead, full-stack**
APIs, services, priorities, reviews

2 **Flutter developers**
customer, seller and driver apps

1 **UI/UX designer**
product and interface design

1 **Frontend developer**
web storefront

WHAT THE PLATFORM DOES

- Customer app: building materials catalog, deals, bulk orders, equipment rental and service requests.
- Bzmarr Pro for business buyers: projects, packages, cashback, statistics and a leaderboard.
- Seller app: listings, order tracking, wallet, coupons and reviews. Driver app: assigned orders, routes, cash in hand and earnings.

MY ROLE

- Set priorities and coordinated delivery with stakeholders across design, mobile and web.
- Built and maintained the REST APIs and services all four apps run on, focused on reliability in production.
- Reviewed the team's work and kept quality consistent across releases.

Charity foundation management system

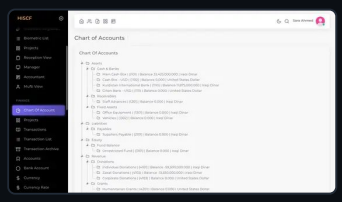

CLIENT	SECTOR	ROLE	ENGAGEMENT
Haji Idrees Surchi Charity Foundation	Humanitarian aid	Lead developer	Rebuild, migration, maintenance

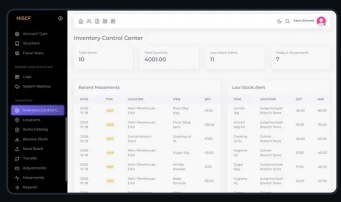

The foundation's legacy system held sensitive beneficiary and medical data. I re-engineered it into a secure platform, moved it to a new dedicated server with a verified data transfer, and was kept on to maintain it.

Assistance approvals

Projects

Chart of accounts

Inventory

WHAT I DELIVERED

- Beneficiary profiles and medical records, assistance requests with review and approval, and salary and stipend disbursement.
- Projects with progress statistics, accounting with a chart of accounts, and inventory across warehouses and branches.
- A document archive, redesigned major modules, and new features during maintenance.

SECURITY AND OPERATIONS

- Migration to a new dedicated server with a full, verified data transfer.
- Sensitive beneficiary information locked down with role-based permissions.
- Authentication logs, an activity log, automated backups and multi-language right-to-left support.

Real estate · API

Fourqan City sales platform

CLIENT	ROLE
Fourqan City, Baghdad	API engineer
FRONTEND	DELIVERED
Next.js, separate developer	API + admin portal

The complete API and admin portal behind the marketing site for a 14-block residential development. A separate developer built the Next.js frontend on top of it.

Unit filters

Master plan

- Unit catalog, categories, cart and order handling, news and a contact pipeline.
- Admin dashboard with its own authentication.
- Sales-agent referral system with click tracking and attribution.
- Token authentication, CORS for the separate frontend, documented endpoints.

STACK PHP 8.1 · OAuth2 tokens · OpenAPI · Next.js

E-commerce · API

Glowtera store API

CLIENT	ROLE
Glowtera, UAE	API engineer
FRONTEND	PAYMENTS
Next.js storefront	Stripe

The full REST API for a UAE online store selling children's care products, integrated with a Next.js storefront and Stripe payments.

Endpoint map — representative

```
CATALOG
GET    /products?category=&sort=
POST   /products/{id}/ratings
CART & ORDERS
POST   /cart/items
POST   /orders
POST   /orders/{id}/cancellation-request
PAYMENTS
POST   /payments/intent
POST   /webhooks/stripe
ACCOUNT & ADMIN
POST   /auth/verify-email
PATCH  /admin/cancellations/{id}/approve
GET    /admin/analytics/sales
```

- Catalog, categories, cart, orders, ratings and an order-cancellation approval workflow.
- Stripe payment intents and webhooks, plus admin analytics for sales and orders.
- Token auth, email verification, password reset and role-based admin endpoints.
- Multi-language responses, S3 media storage and Swagger documentation.

What you can hand me

Whether your team is overloaded or you have no team at all, give me a defined piece of work and I'll own it until it's delivered.

Complete systems

From requirements to production: architecture, development, deployment, documentation and staff training.

e.g. Hope Center, Hana Customs

Modules and features

A defined part of your product, built inside your codebase and following your conventions.

e.g. billing, scheduling, reporting

Bug fixing and maintenance

I work through your bug backlog and support tickets, fixing the cause and testing each fix before it ships.

Per ticket or as a monthly contract

Rebuilds and migrations

Modernize a legacy system and move it to new infrastructure with every record accounted for.

e.g. the HISCF rebuild

APIs and integrations

REST APIs for web and mobile apps, payments, file storage and third-party services, with documentation.

e.g. Bzmarr, Glowtera, Fourqan City

Deployment and servers

Docker, Linux servers, CI/CD, TLS certificates, backups and health checks so the system keeps running.

Staging first, then production

Any stack **I'm not tied to one language or framework.** I adapt to your codebase and conventions, and I use AI-assisted development to get productive quickly in new languages, frameworks and existing projects.

— /process

How a contract works

The same process for a single client or a company outsourcing part of its workload.

01

Brief

You tell me what you need: a system, a module or a list of bugs. I ask questions until the scope is clear.

02

Scope and quote

I send a written scope with deliverables, a timeline and a price.

03

Contract

We sign a contract that fixes the scope, the deadline, payment terms and code ownership.

04

Build

I build and test the work, deploy it to staging, and share progress regularly so there are no surprises.

05

Delivery

Production deployment, documentation, handover and staff training where needed. Maintenance available afterwards.

Working alongside your team

- I work in your repository and follow your branching, code review and ticket workflow.
- I match your existing code style, tests and documentation, so the work reads like your own.
- You get one accountable person for the contract, reachable during your working hours.

— /about

The engineer behind the work

I studied Software & Informatics Engineering at Salahaddin University and have been building production software since 2023: first at product companies, then as team lead at Bzmarr, and now as an independent engineer working under contract.

Clients hand me work so they can stop worrying about it. I build security and data integrity in from day one: access rules enforced in the database, ledgers that always balance, and an audit trail for every change. Every project ships with tests, documentation and a clean handover, and I keep you updated in plain language so you always know where the work stands.

English | کوردی | العربية

Experience

2023 – now	**Independent contract work** Software Engineer Hope Center, Hana Customs, HISCF, Glowtera, Fourqan City.
Oct 2024 – May 2026	**Bzmarr Company** Team Lead, full-stack Part of Mellat Holding. Led a five-person team on the web store and three mobile apps.
Sep 2023 – Jun 2024	**Axis X Group** Software Engineer Features and APIs for Talabk, a food service app.
Feb – Jun 2023	**Gateway ICT Solutions** Software Engineering Intern MyTV+ team: MVC architecture and API development.
2018 – 2023	**Salahaddin University** Software & Informatics Engineering

Capabilities

Engineering	System design, software architecture, multi-tenant SaaS, security and privacy by design, automated testing, technical documentation
Languages & tools	PHP, JavaScript, TypeScript, Vue 3, Inertia.js, REST APIs, Next.js and Flutter integration
Data	MySQL, MariaDB, PostgreSQL, Redis, Meilisearch, double-entry ledgers
Infrastructure	Docker, Linux, Nginx, CI/CD, VPS hosting, backups, monitoring, TLS
Product	Stripe payments, multilingual and right-to-left interfaces, roles and permissions, 2FA, audit logging
Ways of working	Team leadership, stakeholder communication, agile delivery, AI-assisted development

— /contact

Have a system to build or a backlog to clear? Let's talk.

Send a short description of the work and your deadline. I'll reply with questions or a first scope.
